Specification

The examiner has not checked the specification to the extent necessary to determine the presence of **all** possible minor errors (grammatical, typographical and idiomatic). Cooperation of the applicant(s) is requested in correcting any errors of which applicant(s) may become aware of in the specification, in the claims and in any future amendment(s) that applicant(s) may file.

Applicant(s) is also requested to complete the status of any copending applications referred to in the specification by their Attorney Docket Number or Application Serial Number, **if any**.

The status of the parent application(s) and/or any other application(s) cross-referenced to this application, **if any**, should be updated in a timely manner.

Election/Restriction

Applicant's election without traverse of Group I, claims 1-11, wherein the species is Cl-Si- MCM41, in the replies filed on August 7, 2006 and April 4, 2007 is acknowledged. The requirement is still deemed proper and is therefore made FINAL.

It should be noted that the examiner requests clarification of the designation of the elected species as a "metal oxide". The elected species would appear to be a mesoporous zeolite-type material, not a simple metal oxide.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by US 6,437,191 to Choudhary et al.

Choudhary et al. Disclose Si-MCM41 that is treated with compounds containing halogen. Accordingly, the instantly claimed solid catalyst is anticipated by this disclosure. See particularly columns 8-10.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by US 6,383,966 to Han et al.

Han et al. Impregnates siliceous MCM-41 with titanium halide to produce a catalyst. Residual halide remains on the intermediate product. See column 5. This teaching anticipates the herein claimed partially halogenated solid catalyst.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by US 6,459,000 to Choudhary et al.

Choudhary et al. Disclose MCM-41 supports. They are complexed with metal oxide materials that are partially halogenated with hydrogen halides. This disclosure anticipates both the instantly claimed composition and the method for the production thereof. See particularly columns 2 and 3. Note this reads on both the elected MCM species and the metal oxide embodiments.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The examiner has cited additional prior art cumulative to that applied above. Applicant should keep all of the prior art of record in mind when presenting amendments and arguments.
